

Environment Policy Statement

LBW Environment Pty Ltd is committed to the continuous improvement and management of the environmental impacts of our business and those of our clients.

We believe that environmental sustainability is both a management obligation and the responsibility of every employee and we will provide ongoing training and guidance to ensure relevant legislative requirements are met or exceeded.

Workplace factors affecting the environment will be assessed, monitored and evaluated in our pursuit of environmental sustainability.

It is our expectation that all members of staff, contractors, suppliers and visitors value the welfare of the environment as highly as we do, acknowledge their responsibility and will adhere to our sustainability and environmental policies and procedures.

LBW will strive to understand and meet the expectations of the community with respect to the environment and will endeavour to use resources and energy efficiently and to minimise wastes, emissions and pollution.

It is a requirement of our project management system that every project be reviewed in light of the environment prior to commencement of the project. Risks will be identified, assessed and managed to minimise potential adverse environmental impacts.

A commitment to reviewing the policy each year will ensure legislative and organisational requirements will continue to be met.
